    J. BIO.L. Chem. 244:3550-3560(1969).
    INISCELLANDOUS: THE CREGIOU OF THIS CHAIN HAS THE INV (3) MARKER
    MISCELLANDOUS: THIS IS A BENCE-JONES PROTEIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   "The amino acid sequence of a kappa type Bence-Jones protein. complete sequence and the location of the disulfide bridges.";
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of a single chain FV (scrtV) derivative of antibody 193/AD3, comprising the heavy (WI) and light (VI) chain variable regions of 193/AD3 joined by an artificial, flexible linker peptide. The scrtV was obtained by GR amplification of cDNAs for 193/AD3 value of the regions and cloning in vector phaps. 193/AD3 is a reasurable of Enti-inman Factor in TITIV/Accutable Scrtvii (VIII) of the control of the regions and cloning in vector phaps. 193/AD3 is concluding activity on the preceding activity of FIXA entivating activity. Administration leads to an contrast of the preceding activity, administration leads to an control of FVIII and inhibitors. This allows for rapid blood coagulation even on in the absence of FVIII or FVIII, and in the case of FVIII or TITIO and the case of FVIII or TITIO and in the case of FVIII or TITIO and the case of FVIII or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relakes to movel muchaic acid esquences encoding light and heavy chain variable regions of the antibody 31.1. Sequences of the thromtion are useful in expressing chimerised 31.1 antibodies, which can be used for treating pancreatic cancer or for diagnosing puncreatic careful antibody. Therapy. The presequence is chimeric 31.1 antibody light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 4; Fig 2; 40pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding light and heavy chain variable regions of antibody 31.1, useful for expressing chimerized 31:1 antibodies for treating pancreatic cancer or for diagnosing pancreatic carcinoma

                                This sequence represents the HP1/2 antibody kappa chain variable region (VR). This process sequence was used in the production of a humanised recombinant anti-VLA4 antibody (rab). The humanised rab comprises non-human complementarity determining regions at VH positions 3-35 (CDR1), 59-55 (CDR2) and 59-102 (CDR3). It may further comprise non-human residues at Framework positions 2-30, 75, 77-79 or 65-67, or 69-71 and 65-71, or 64-65, or 39 and 40 or 24. The VIO of the rab has non-human CDRs at positions 24-24 (CDR1), 59-55 (CDR2) and 59-79 (CDR3). It may also have non-human residues at framework positions 60 and 67. It may also have non-human residues at framework positions 60 and 67. It may also have non-human residues at framework positions 60 and 67. It may also have non-human residues at framework positions 60 and 67. It may also have non-human completed framework with no unusual residues. The rab completed framework with no unusual residues. The rab completed framework with no unusual residues. The rab completed framework with no unusual residues.
